

- Experimental data from Huang, R. K., ..., & Johnson, J. E. (2011). *Journal of molecular biology*, 408(3), 541-554.
- Simulation data generated from CRY SOL, using multiple atomistic PDBs of the packaged DNA
- Question: Why is there a minimum in $I(q)$ at $q=0$ for experiment, but a maximum in $I(q)$ for the curve generated from CRY SOL?
